BESS Ecosystem in India – Players, Localisation and 2021–2036 Outlook

Corporate Planning (CP-PR1), Maruti Suzuki India Limited | Data as of Oct 2026 | Indian & global players | ELIIY Power highlighted | Last 5 years (2021–26) and next 10 years (2026–36)

INTERNAL

Overview

In one line: India's BESS market went from pilots (2021–23) to an 8.7 GWh fleet by June 2026. Integration and assembly are being localised fast, but cells and battery materials (over half of system cost) are still mostly imported, mainly from China. Suzuki's partner **ELIIY Power** is strongest exactly where India is weakest – safe, long-life cells.

8.7 GWh
Installed BESS, Jun 2026 (0.78 GWh in Dec 2025 – 11x)
IESA [E1]

260 GWh
Live ESS tender pipeline; 281 GWh tendered since 2018
IESA [E1, E2]

83.6%
China's share of India's Li-ion battery imports, FY26 (US$3.9 bn)
Koan / ICS [E9]

~2 GWh
Domestic Li-ion cell capacity today → ~110 GWh by 2030
IESA [E3]

~23 GWh/yr
BESS pack / container assembly already commissioned (4 players)
SMM [E6]

20%
Minimum local content for VGF-backed BESS (Dec 2025)
[E7]

236 GWh
BESS needed by FY2031-32 (CEA NEP)
[E4]

21.59%
Suzuki's stake in ELIIY Power – largest shareholder (Nov 2023)
[EL1]

BESS ecosystem at a glance – how localised is each stage?

click a stage to open its player view · purple = ELIIY Power presence

STAGE 1
Minerals & refining
Mostly imported
~5% local today
ELIIY: None

STAGE 2
Cell materials
Mostly imported
~10% local today
ELIIY: Process know-how

STAGE 3
Li-ion cells
Mostly imported
~10% local today
ELIIY: CORE STRENGTH

STAGE 4
Packs, containers & integration
Partly localised

STAGE 5
PCS, EMS & controls
Partly localised

STAGE 6
Developers & EPC
Largely local

~55% local today

ELIIY: Strong

~40% local today

ELIIY: Moderate

~90% local today

ELIIY: None

STAGE 7

Demand / buyers

Largely local

~100% local today

ELIIY: Japan only

▶

STAGE 8

Recycling & second life

Partly localised

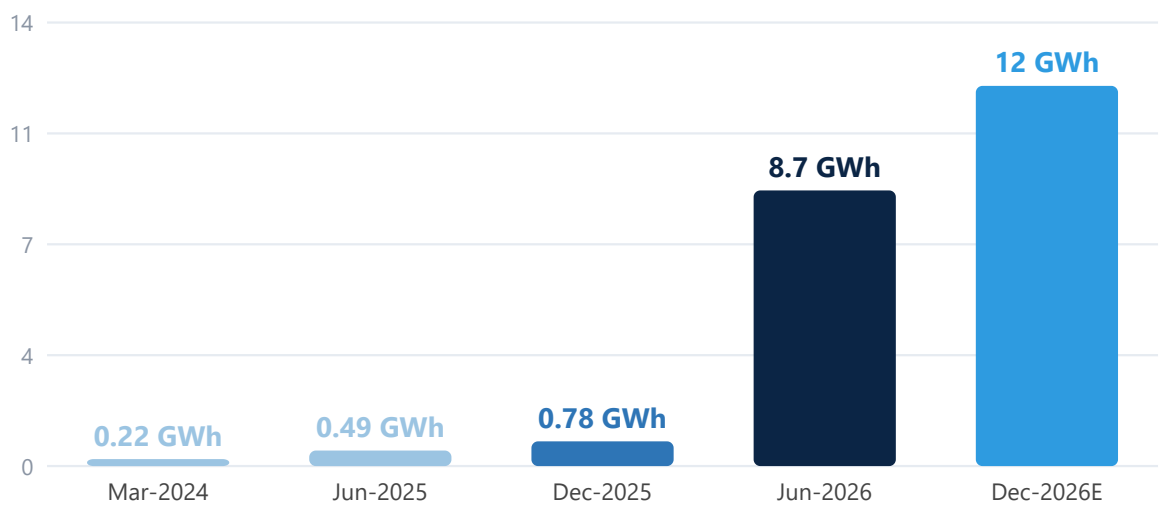

~50% local today

ELIIY: Policy stage

Localisation bar = CP-PR1 qualitative estimate of the share of the stage's value made in India today, based on [E3, E6, E7, E8, E10, E11, E12]. ELIIY presence from company sources [EL1–EL6]; not a sourced metric.

Installed BESS in India

cumulative GWh

Mercom [E14] (Mar-24); Eninrac [E15] (Jun-25); IESA [E1] (Dec-25, Jun-26); Dec-26E = lower end of IESA's 12–15 GWh expectation [E1].

Four things to know

Theme	What the data says
Demand is real	7.9 GWh commissioned in H1 2026 alone, ~70% merchant (ACME 3.2 GWh, Adani 3.4 GWh, Juniper 0.5 GWh) [E1]
Local = assembly	Market is shifting to "import cells, assemble packs and containers in India" – JSW, Tata AutoComp–Gotion, GoodEnough, Waaree [E6]
Cells are the gap	Cells are 50–60% of BESS cost [E8]; only ~1.4 GWh of PLI cell capacity commissioned vs 50 GWh target [E5]
ELIIY fit	Japan-made LFP cells with no fire/smoke in nail, crush and overcharge tests and ~17,000-cycle life (70% capacity) [EL2]; Japanese origin avoids China's 2025 export controls on cell know-how [E10]

Ecosystem & Major Players – by stage

> **How to read:** eight stages from minerals to recycling. Each card lists Indian players, global players active in or supplying India, how much of that stage is made in India today, and – in the purple strip – **ELIIY Power's strength or presence** in that stage.

All stages | Mostly imported | Partly localised | Largely local

Stage 1 · Minerals & refining

Lithium, nickel, cobalt, graphite, phosphate **Mostly imported**

INDIAN PLAYERS

- KABIL – overseas lithium block (Argentina) [S39]
- Lohum – 30,000 t/yr lithium-carbonate refining plan [S39]
- NCMM ₹16,300 Cr – exploration, overseas assets, recycling [E19]

GLOBAL PLAYERS / SUPPLIERS

- Ganfeng Lithium, Tianqi Lithium (China) – lithium mining & refining
- Albemarle (US), SQM (Chile) – lithium producers
- Australia, Argentina, Chile, Zimbabwe – ore sources
- China refines ~74% of lithium, 80% of cobalt [E5]

LOCALISATION TODAY

95% imp.

- **Local:** Effectively zero domestic lithium refining [E5]
- **Imported:** Refined lithium and other minerals almost fully imported

LAST 5 YEARS

- NCMM launched Jan 2025; overseas MoUs (Australia, Argentina, Zambia, Zimbabwe…) [E19]

NEXT 10 YEARS

- Lohum refining; recovery from recycling; overseas assets

> **ELIIY Power – None:** No upstream mining or refining; buys materials (CP-PR1 view)

Stage 2 · Cell materials

Cathode (LFP CAM), anode (graphite), electrolyte, separator, Cu foil **Mostly imported**

INDIAN PLAYERS

- Himadri – LFP cathode 40k MTPA Ph-1 (Q3 FY27) → 200k MTPA [S38]
- Epsilon Advanced Materials – anode 30k TPA by 2028 → 100k TPA [S37]
- Neogen Chemicals – electrolyte (value-chain map)
- Reliance – materials within giga-complex

GLOBAL PLAYERS / SUPPLIERS

- Hunan Yuneng, Shenzhen Dynanonic – LFP cathode (China)
- BTR, Shanshan – graphite anode (China)
- Tinci, Capchem – electrolyte (China)
- SEMCORP – separator (China)
- China ~98% of global LFP cathode [E5]

LOCALISATION TODAY

90% imp.

- **Local:** Pilot volumes only; plants under construction
- **Imported:** Most cathode, anode, electrolyte, separator imported

LAST 5 YEARS

- Component scheme (~₹12,000 Cr) reported approved Jun 2026; Epsilon ₹145 Cr ECMS support

NEXT 10 YEARS

- Himadri and Epsilon at scale by 2028–30; partial localisation by 2030

> **ELIIY Power – Process know-how:** Fully automated in-house electrode kneading, coating and pressing at Kawasaki – process strength, not a materials supplier [EL4]

Stage 3 · Li-ion cells

LFP cells – 50–60% of BESS cost [E8] **Mostly imported**

INDIAN PLAYERS

- Reliance New Energy – 40 → 120 GWh/yr (Jamnagar)
- Agratas (Tata) – 20 → 40 GWh (Sanand), cells 2027
- Exide Energy (SVOLT tech) – 6 GWh live Sep 2026 → 12
- Amara Raja (Gotion tech) – 2 → 16 GWh
- Ola Cell Tech – PLI 20 GWh
- Waaree – 3.5 GWh cells FY27
- TDSG (Toshiba–Denso–Suzuki) – hybrid cells

GLOBAL PLAYERS / SUPPLIERS

- CATL – world #1; ~39.9% EV share H1 2026 [G1]
- BYD – #2 EV cells; top BESS system supplier 2025 [G1]
- Hithium – storage specialist; supplied Juniper [E1, G1]
- EVE, CALB, Gotion, SVOLT (China)
- Envision / AESC – supplied ACME [E1]
- LG Energy Solution, Samsung SDI, SK On (Korea) – shifting to LFP for ESS [G1]

LOCALISATION TODAY

90% imp.

- **Local:** ~2 GWh domestic capacity [E3]; ~1.4 GWh PLI commissioned [E5]
- **Imported:** Nearly all BESS cells imported; China 83.6% of Li-ion battery imports FY26 [E9]

LAST 5 YEARS

- PLI 2021; 40 GWh awarded 2022; licences with SVOLT (2022) and Gotion (2023); first cells 2026

NEXT 10 YEARS

- ~110 GWh domestic capacity by 2030 [E3]; sodium-ion from early 2030s

> **ELIIY Power – CORE STRENGTH:** Large LFP cells (HY battEliiy L): no fire/smoke in nail, crush, overcharge tests; 70% capacity after ~17,000 cycles; first large Li-ion to pass TÜV Rheinland safety test [EL2]. New 280 Wh/kg high-Ni E series (FY2026) [EL5]. Not yet in India – SMC plan for India hub ~20 GWh long term [S49]

Stage 4 · Packs, containers & integration

Modules, packs, BMS, racks, HVAC / liquid cooling, fire safety **Partly localised**

INDIAN PLAYERS

- JSW Energy – 5 GWh Pune; first 3rd-party order 200 MW/400 MWh (₹444 Cr) [E6]
- Tata AutoComp–Gotion – 6 GWh, supplying Tata Power [E6]
- GoodEnough Energy – 7 GWh Noida (Jan 2026) [E6]
- Waaree ESS – 5.15 GWh Gujarat (Jul 2026) [E6]
- Amara Raja 1.5 GWh, Exide 1.5 GWh packs [E6]
- HBL, Okaya, Pace Digitek, Prostarm

GLOBAL PLAYERS / SUPPLIERS

- Fluence (US) – utility storage integrator
- Tesla (US) – Megapack
- Sungrow (China) – PowerTitan systems
- Wärtsilä (Finland) – Quantum systems
- BYD, Hithium, Envision – turnkey systems

LOCALISATION TODAY

55% 45% imp.

- **Local:** ~23 GWh/yr commissioned by 4 players [E6]; containers & BoP 20–30% of cost localisable [E7]
- **Imported:** Cells, BMS chips, some cooling / fire-safety parts

LAST 5 YEARS

- Shift from imported complete systems to local assembly with imported cells [E6]

NEXT 10 YEARS

- Pack-to-container capacity 180–200 GWh by 2030 [E3]

ELIIY Power – Strong: Own storage systems – home (POWER iE Connect, V2H), portable (POWER YIILE 3), 270 kWh commercial, grid product; cell-level safety design [EL3, EL7]

Stage 5 · PCS, EMS & controls

Power conversion, energy management software, SCADA **Partly localised**

INDIAN PLAYERS

- Delta Electronics India – Make-in-India 1.1 MW PCS (Krishnagiri, TN); 110 MW order [E17]
- Hitachi Energy India – first BESS order 165 MW/330 MWh (Q1 FY27) [E24]
- Tata Power – EMS / O&M
- Indian EMS start-ups (indigenous EMS required for VGF DVA) [E7]

GLOBAL PLAYERS / SUPPLIERS

- Sungrow, Huawei (China) – PCS / inverters
- SMA (Germany), Power Electronics (Spain) – PCS
- Siemens, Schneider Electric, ABB – grid & controls
- Fluence (Mosaic/IQ), Wärtsilä (GEMS), Tesla (Autobidder) – EMS & trading software

LOCALISATION TODAY

40% 60% imp.

- **Local:** Local PCS assembly started; EMS must be indigenous for VGF projects [E7]
- **Imported:** Power semiconductors (IGBT/SiC), many imported PCS

LAST 5 YEARS

- First Make-in-India PCS and grid-scale orders 2026

NEXT 10 YEARS

- Local PCS assembly mainstream; grid-forming inverters; chips still imported

> **ELIIY Power – Moderate:** Remote monitoring technology; VPP demonstration with frequency (LFC) control using networked home batteries [EL3]

Stage 6 · Developers & EPC

Project development, EPC, grid connection, O&M **Largely local**

INDIAN PLAYERS

- Developers: ACME (3.2 GWh), Adani (3.4 GWh), Juniper, JSW Energy, ReNew, Tata Power Renewable, Torrent [E1]
- Tender winners: Pace Digitek, Oriana, Bondada, Prostarm, Barbrik [S9, E20]
- EPC: L&T, Sterling & Wilson, Jakson Green, Tata Power

GLOBAL PLAYERS / SUPPLIERS

- Sembcorp (Singapore), Vena Energy – developers in India

LOCALISATION TODAY

90%

- **Local:** Fully domestic execution
- **Imported:** –

LAST 5 YEARS

- Moved from pilots to GWh-scale; ~70% of H1 2026 additions merchant [E1]

NEXT 10 YEARS

- ~50 → 140 GWh/yr storage additions to execute [E2]

> **ELIIY Power – None:** Not a developer; sells through partners such as Daiwa House in Japan [EL1]

Stage 7 · Demand / buyers

Tendering agencies, DISCOMs, C&I, data centres **Largely local**

INDIAN PLAYERS

- SECI, NTPC / NVVN (22 GWh tendered in H1 2026), NHPC, SJVN [E1]
- State utilities: GUVNL, RVUNL, APTRANSCO, KSEB, MSEDCL, BSPGCL
- C&I, data centres, telecom, AEML (Mumbai)

GLOBAL PLAYERS / SUPPLIERS

- –

LOCALISATION TODAY

100%

- **Local:** Domestic demand
- **Imported:** –

LAST 5 YEARS

- 281 GWh storage tendered since 2018; 53 GWh cancelled [E1]

NEXT 10 YEARS

- 4% ESO by 2029-30; C&I 23–31 GWh by 2032 [E25]

> **ELIIY Power – Japan only:** Customers in Japanese housing, commercial facilities, warehouses and disaster-prep (e.g., 91 evacuation centres in Funabashi) [EL3]; no Indian customers yet

Stage 8 · Recycling & second life

Recycling, EPR credits, second-life packs **Partly localised**

INDIAN PLAYERS

- Lohum, Attero, BatX – recycling
- LICO Materials – second-life BESS (JSW MG Project Revive) [S47]
- Tata Power – EV battery repurposing

GLOBAL PLAYERS / SUPPLIERS

- Brunp (CATL group), GEM (China) – recycling
- Redwood Materials (US), Umicore (Belgium) – recycling & materials

LOCALISATION TODAY

50% 50% imp.

- **Local:** Local processing; ₹1,500 Cr recycling scheme [S67]
- **Imported:** Some black-mass processing know-how

LAST 5 YEARS

- BWMR 2022 EPR; recovery 70% (FY25) → 90% (FY27)

NEXT 10 YEARS

- First large EV/BESS end-of-life wave after 2030; feeds domestic minerals

> **ELIIY Power – Policy stage:** Published basic policy on reuse of ELIIY products [EL3]; long cell life reduces replacement volumes

Player lists from IESA [E1, E3], SMM [E6], Delta [E17], Hitachi Energy [E24], IEEFA [E5], global brief [G1] and the Strategy Dashboard register [S#]. ELIIY [EL1–EL7, S49]. Localisation % per stage is a CP-PR1 qualitative estimate. Global supplier lists are illustrative of leading firms, not exhaustive.

Global Players & Suppliers – who they are and what they do

Pattern: China leads every upstream stage (minerals, materials, cells). Korea and Japan are the main non-Chinese cell sources. Integration and power electronics are global and mixed. **ELIIY Power** is a niche Japanese specialist – small in volume, strong on safety and cycle life.

~74% / 80%
China's share of global lithium / cobalt refining
IEEFA [E5]

~98%
China's share of global LFP cathode production
IEEFA [E5]

39.9%
CATL global EV-battery share, H1 2026
[G1]

612 GWh
Global ESS cell shipments 2025 (+95%); top 10 all Chinese (~89%)
[G1]

2006
ELIIY Power founded – Japanese large Li-ion cell & storage specialist
[EL1]

All | Minerals & refining | Cell materials | Cells | Integration / systems | PCS / EMS | Recycling

Area	Company	HQ	Business	India link
Minerals	**Ganfeng Lithium**	China	Integrated lithium mining, refining and battery materials; also makes batteries	Indirect – via Chinese cell and material supply
Minerals	**Tianqi Lithium**	China	Lithium mining (Australia, Chile stakes) and lithium chemicals	Indirect
Minerals	**Albemarle**	USA	One of the largest lithium producers (brine and hard rock)	Indirect
Minerals	**SQM**	Chile	Lithium from Atacama brine; specialty chemicals	Indirect
Materials	**Hunan Yuneng**	China	Large LFP cathode material maker for cell producers	Indirect – via imported cells
Materials	**Shenzhen Dynanonic**	China	LFP cathode materials	Indirect
Materials	**BTR New Material**	China	Graphite anode materials (natural and synthetic)	Indirect
Materials	**Shanghai Putailai / Shanshan**	China	Anode materials, separators, coatings	Indirect
Materials	**Tinci, Capchem**	China	Electrolyte and lithium salts	Indirect
Materials	**SEMCORP (Yunnan Energy)**	China	Lithium-ion separator films	Indirect
Cells	**CATL**	China	World #1 battery maker; LFP EV and storage cells, sodium-ion;	Supplies Indian EV / BESS projects via

			Europe and Indonesia plants	imports (CP-PR1 view)
Cells	**BYD**	China	Blade LFP cells, EVs and turnkey BESS; top BESS system supplier 2025 [G1]	EVs and storage systems sold in India
Cells	**Hithium**	China	Storage-only LFP cell specialist; very large-format cells for long-duration	Supplied Juniper's 500 MWh project [E1]
Cells	**EVE Energy**	China	LFP storage cells (~12% share) and EV cells; Hungary plant 2027 [G1]	Indirect
Cells	**CALB**	China	High-density LFP cells; Portugal plant from 2028 [G1]	Indirect
Cells	**Gotion High-Tech**	China (VW largest shareholder)	LFP cells, packs, BESS; Morocco gigafactory	Technology to Amara Raja; JV with Tata AutoComp (6 GWh) [E6, E10]
Cells	**SVOLT**	China	LFP / NMC cells; technology licensing	Technology licence to Exide (6 GWh plant) [E10]
Cells	**Envision AESC**	China / Japan	EV and storage cells; also wind turbines (Envision)	Supplied ACME's 3.2 GWh project [E1]; AESC licence to Agratas [S20]
Cells	**LG Energy Solution**	Korea	Converting US/Poland lines to LFP for ESS; >60 GWh ESS cell capacity by end-2026 [G1]	Limited in BESS today
Cells	**Samsung SDI, SK On**	Korea	Moving into LFP ESS cells in US	Limited
Cells	**ELIIY Power**	Japan	Large LFP cells and storage systems; safety and long life (~17,000 cycles); Suzuki largest shareholder [EL1, EL2]	Not yet in India – Suzuki / MSIL partner option [S49]
Integration	**Fluence**	USA (Siemens + AES)	Utility-scale storage systems and Mosaic / IQ software	Active in Indian market (value-chain map)
Integration	**Tesla Energy**	USA	Megapack utility storage; Autobidder trading software	Present in global tenders (value-chain map)
Integration	**Sungrow**	China	PowerTitan storage systems and PCS / inverters; large global share	Supplies PCS and systems in India
Integration	**Wärtsilä**	Finland	Quantum storage systems and GEMS energy-management software	Active in Indian market (value-chain map)
PCS	**Huawei Digital Power**	China	Smart string storage, PCS and inverters	Limited for utility tenders
PCS	**Hitachi Energy**	Switzerland / Japan	Grid integration, power quality, BESS (e-mesh)	India arm won first BESS order 165 MW/330 MWh [E24]

PCS	**Delta Electronics**	Taiwan	Power electronics, PCS, EV chargers	Make-in-India PCS from Krishnagiri, TN [E17]
PCS	**SMA, Power Electronics**	Germany / Spain	Utility-scale PCS / inverters	Limited
PCS	**Siemens, Schneider Electric, ABB**	Europe	Switchgear, grid controls, SCADA and EMS	Large India presence in grid equipment
Recycling	**Brunp (CATL), GEM**	China	Battery recycling and precursor materials	Indirect
Recycling	**Redwood Materials, Umicore**	USA / Belgium	Recycling and cathode materials	Limited

Business descriptions are general company profiles. Figures marked [G1] are from the global LFP manufacturers research brief (Oct 2026, industry news and research sites – verify with company filings). India links: Hithium → Juniper, Envision → ACME [E1]; SVOLT → Exide, Gotion → Amara Raja [E10]; Gotion → Tata AutoComp JV [E6]; AESC → Agratas [S20]; Delta, Hitachi Energy [E17, E24]. ELIIY Power: [EL1–EL6].

Global cell suppliers – scale vs differentiation

indicative positioning

CP-PR1 qualitative positioning to frame discussion; bubble size = relative scale. ELIIY placed for differentiation (safety, cycle life) rather than scale. Not a sourced ranking.

ELIIY Power Co., Ltd. – Suzuki's battery partner

Japanese maker of large-size lithium-ion batteries and electricity storage systems, founded in 2006 to serve both stationary storage and mobility. Produces cells at its fully automated Kawasaki plant. Suzuki invested ¥1 bn in 2012 and a further ¥10 bn in 2023, becoming the largest shareholder (21.59%), plus ¥15 bn of convertible bonds. The two companies are jointly developing batteries for both storage systems and mobility [EL1, EL3].

~17,000 cycles
70% capacity retained after ~15 years of full cycling (HY battEliiy L) [EL2]

0 incidents
No battery-cell-caused accidents since 2006 [EL3, EL4]

TÜV first
First large Li-ion battery to pass TÜV Rheinland safety inspection (11 test items) [EL2]

280 Wh/kg
New high-nickel HY Battery E series; mass production FY2026, Kawasaki [EL5]

Core strengths

Safety
No fire, smoke or thermal runaway when punctured with a nail, crushed or overcharged. Safety is designed in at individual cell level, not only through the BMS.
[EL2]

Long life
Retains 70% capacity after ~15 years of full charge–discharge (~17,000 cycles); R&D target of up to 30-year life. SMC's internal plan cites ~10,000 cycles for the 2nd-gen India product vs 2,000–3,000 for conventional cells.
[EL2]; [S49 – confidential]

Temperature tolerance
Developed for wide operating temperatures – relevant for Indian heat and outdoor C&I / telecom sites.
[EL1, EL2]

Manufacturing quality
Fully automated plant (electrode kneading, coating, stacking, assembly) in a clean, pharmaceutical-style environment; ISO 9001 / 14001 certified.
[EL4, EL6]

Systems & V2H
Home storage (POWER iE Connect, V2H-compatible, new 10.7 kWh unit Oct 2026), portable POWER YIILE 3, 270 kWh commercial system, grid product; VPP demo with frequency (LFC) control.
[EL3, EL7]

Mobility link to Suzuki
HY battEliiy P motorcycle starter batteries; SyncCell HY93SS adopted as genuine part on Suzuki GSX-8T/TT.
[EL3]

ELIIY Power presence across the BESS chain

Stage	ELIIY presence / strength	Level

1 Minerals	No upstream mining or refining (CP-PR1 view)	**None**
2 Cell materials	In-house electrode process (kneading, coating, pressing); buys materials	**Process**
3 Cells	Core business – LFP large cells (L series), new high-Ni E series; Kawasaki plant	**Core strength**
4 Packs & systems	Own storage systems – home, portable, commercial 270 kWh, grid	**Strong**
5 EMS / controls	Remote monitoring technology; VPP / frequency-control demonstration	**Moderate**
6 Developers / EPC	Not a developer; works through partners (e.g., Daiwa House housing projects)	**None**
7 Customers	Japan: homes, rental housing, commercial facilities, warehouses, disaster-prep (91 evacuation centres, Funabashi). India: none yet	**Japan only**
8 Recycling / reuse	Published basic policy on reuse of ELIIY products	**Policy stage**

[EL1–EL7]; "None" levels are CP-PR1 inference from absence of public information.

ELIIY vs India's gaps

India gap	How ELIIY / Suzuki could help
Cells 50–60% of cost and mostly imported [E8, E9]	Non-Chinese LFP cell technology for a future India line (SMC plan: Japan SOP Jun 2029, 0.48 GWh/yr; India hub ~20 GWh long term) [S49]
China export controls on cell know-how (Nov 2025) [E10]	Japanese technology – not subject to Chinese licensing approval
Fire-safety concerns; new CEA safety rules [S1]	Cell-level safety record; TÜV certification [EL2]
Hot climate shortens battery life	Long cycle life and temperature tolerance [EL2]
Weak residential / V2H segment	Proven V2H home systems in Japan [EL7]; Suzuki EV and dealer channel
Scale and cost	**Weakness:** small volumes today; cost vs Chinese cells must be proven – key question for joint research

India data [E8–E10, S1]; Suzuki/ELIIY plan from SMC proposal [S49 – confidential]; scale/cost caveat is CP-PR1 view.

ELIIY Power – Last 5 Years Journey (2021–2026)

109,000+
Cumulative storage systems shipped (Jun 2026) – up from 94,000 (Sep 2023)
[EL8, EL9]

0
Cell-caused smoke/fire incidents in 20 years (to Oct 2026)
[EL10]

¥26 bn
Suzuki funding 2023: ¥10 bn equity + ¥15 bn convertible bonds (plus ¥1 bn in 2012)
[EL1]

¥65.4 bn

364

#1

Estimated enterprise value – Nikkei "NEXT Unicorn" (Dec 2024)

[EL11]

Employees (Apr 2026); paid-in capital ¥50.2 bn

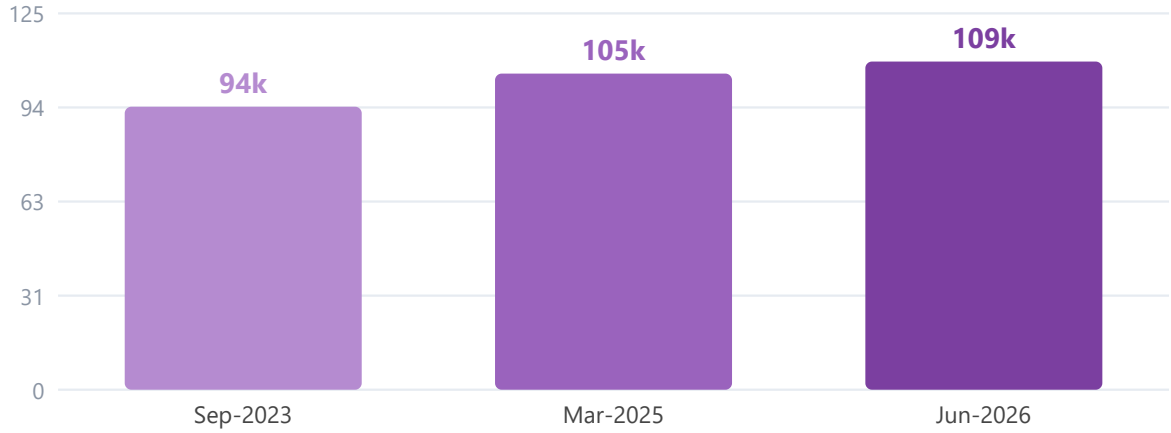

[EL12]

Japan share in small storage systems (1–3 kWh), FY2017–21

[EL9]

Cumulative storage systems shipped

units, thousands

Sep-2023: 94,000 [EL8]; Mar-2025: 105,000 [EL13]; Jun-2026: 109,000 [EL9]. ELIIY does not publish annual revenue or GWh; third-party web estimates (US$10–15 M) are not used.

What changed in five years

Dimension	2021	2026
Business focus	Home & portable storage (Daiwa House, SECOM, NTT Docomo)	Home + industrial (OEM) + V2H + mobility batteries + grid product
Chemistry	LFP only (HY battEliiy L)	LFP L series (improved +10% capacity) + first high-nickel E series (280 Wh/kg)
Cycle life claim	~17,000 cycles at 70%	22,000 cycles at 60%; 20-year 60% capacity warranty
Key shareholder	Daiwa House Group (backer since 2006); Suzuki ~1 bn yen stake since 2012	Suzuki (21.59%); Daiwa House 20.01%
Mobility	Motorcycle starter battery (Honda HY93)	Suzuki GSX-8T/TT battery; BEV Carry demo; joint storage + mobility cell development
Overseas / India	None	None yet – India BESS under joint SMC–MSIL study

[EL1, EL2, EL3, EL9, EL10, EL12, EL13, EL14]; India status from SMC proposal [S49 – confidential].

Year-by-year journey 2021–2026

2021–2022

Holds long-running top share in Japan's small storage systems (1–3 kWh) – POWER YIILE 3 / HEYA [EL9]. Customers: Daiwa House rental housing, SECOM, NTT Docomo shops, NITE large-battery test facility; HY93 starter battery first adopted on a Honda mass-production motorcycle [EL9].

2023

Cumulative shipments pass 94,000 systems (Sep) [EL8]. **Nov – Suzuki invests ¥10 bn (becomes largest shareholder, 21.59%) and subscribes ¥15 bn of convertible bonds**; agreement to jointly develop a Li-ion battery usable in both storage systems and mobility. Funds mainly for capex and joint development [EL1, EL8].

2024

Mar – POWER iE Connect V2H home system launched; joins "Team Suzuki CN Challenge" [EL15]. Apr – Japan Resilience Award with Daiwa House [EL15]. Starts industrial-storage OEM; Nov – 194.4 kWh industrial system for Hanshin Tigers dormitory (Amagasaki decarbonisation zone) [EL14]. Jul – POWER iE5 GRID II hybrid system; Dec – Seibu Railway "station resilience" adopts POWER YIILE 3; Nikkei lists ELIIY as a "NEXT Unicorn" (¥65.4 bn est. value) [EL11].

2025

Mar – cumulative shipments 105,000 [EL13]. Apr – **supplies HY battEliiy L cells (as drive battery) + POWER iE Connect V2H for Suzuki's BEV Carry kei-truck "moving battery" farm demonstration** (Hamamatsu, Kosai, Toyokawa, Aso) [EL13]. SyncCell HY93SS adopted on Suzuki GSX-8T/TT [EL3]. Sep – Japan Patent Office rejects ELIIY's challenge to a GS Yuasa Li-ion patent [EL16].

2026

Apr – JC-STAR ★1 IoT security label for POWER iE Connect [EL10]. Jun – cumulative shipments 109,000+ [EL9]. Sep – 20th anniversary; first high-nickel cell "HY Battery E series" (280 Wh/kg, >2x L series Ver.9) announced after ~4 years of R&D [EL5]. Oct – 10.7 kWh V2H home unit: L-series cell +10% capacity, −20 to 60 °C, 22,000 cycles at 60%, 20-year 60% warranty (on sale Jan 2027) [EL10]. Joint SMC–MSIL study of India BESS business begins (Sep–Oct) [S49].

ELIIY Power – Next 10 Years Plan & Projection (2026–2036)

> **How to read:** items tagged [EL#] are announced by ELIIY or Suzuki. Items tagged [S49] are from SMC's confidential BESS proposal. The capacity path chart and items marked "CP-PR1 projection" are our illustrative scenario – ELIIY has not published a 10-year capacity plan.

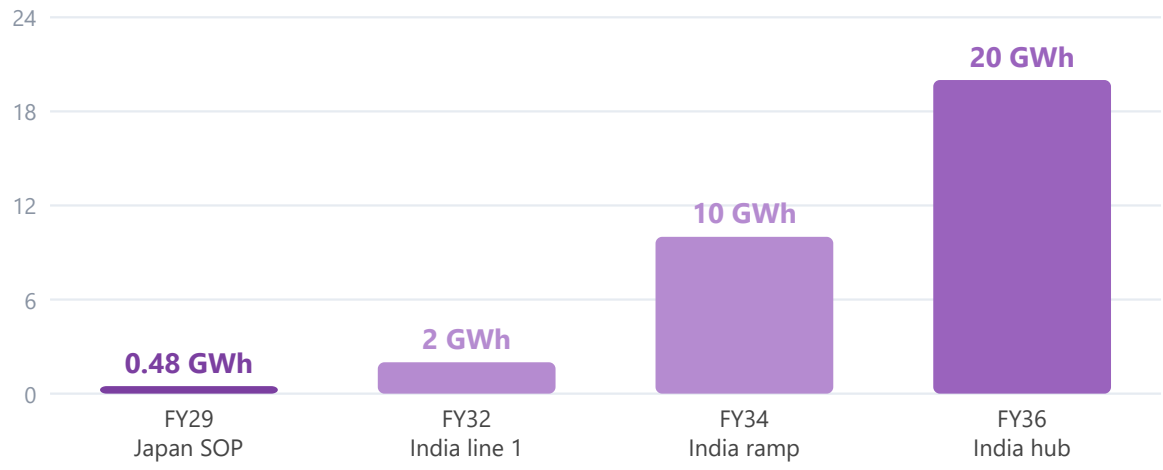

Announced / planned milestones

When	Milestone	Status	Source
FY2026	Mass production of high-nickel E series at Kawasaki – portable power, embedded backup, data-centre backup, light mobility	**Announced**	[EL5]
Jan 2027	10.7 kWh POWER iE Connect unit on sale; S-JET third-party certification planned	**Announced**	[EL10]
2027–28	Joint storage + mobility battery with Suzuki; learnings from BEV Carry demo feed design	**In development**	[EL1, EL13]
Jun 2029	2nd-gen long-cycle LFP battery SOP in Japan, 0.48 GWh/yr; ~10,000 cycles vs 2,000–3,000 conventional	**SMC plan**	[S49]
To FY2030	Japan as "mother plant"; India market research and BESS business model with MSIL	**SMC plan**	[S49]
Long term	India production hub ~20 GWh/yr (EV + BESS shared volume)	**SMC plan**	[S49]

[EL1, EL5, EL10, EL13]; SMC proposal 28 Sep 2026 [S49 – confidential].

Illustrative capacity path – ELIIY technology cells

GWh/yr, CP-PR1 projection

CP-PR1 illustrative scenario, not an ELIIY/SMC forecast. *FY29 0.48 GWh/yr Japan from [S49]; India ramp (2 → 10 → 20 GWh/yr) assumes the stage gates in the Startup Business Model (cell-hub decision FY32) and the ~20 GWh long-term target [S49]. Current Kawasaki output is not disclosed.*

10-year roadmap 2026–2036 – ELIIY in Japan and India

2026–2027 · Product renewal

E series mass production (FY2026) and 10.7 kWh V2H unit (Jan 2027) [EL5, EL10]. Expand industrial OEM and data-centre backup in Japan [EL5, EL14]. India: joint SMC–MSIL market research; Gate 0/1 decisions [S49].

2028 · Common battery

Joint Suzuki–ELIIY storage + mobility cell design frozen (CP-PR1 projection based on [EL1]). India: pilots at MSIL sites using imported ELIIY systems; V2H pilot with e Vitara (CP-PR1 projection).

2029–2030 · Scale-up in Japan

2nd-gen long-cycle LFP SOP Jun 2029, 0.48 GWh/yr; Japan remains mother plant to FY2030 [S49]. India: import ELIIY cells for pack/container assembly by the MSIL–SMC NewCo [S49].

2031–2032 · India decision

India cell-hub go/no-go (shared EV + BESS volume >10 GWh; cost ≤ China landed + duty) – CP-PR1 gate. If go: first India line ~2 GWh/yr (CP-PR1 projection).

2033–2034 · India ramp

India line scales towards ~10 GWh/yr; local cathode/anode sourcing (Himadri, Epsilon) for DVA (CP-PR1 projection).

2035–2036 · Long-term target

India hub approaching ~20 GWh/yr for EV + BESS [S49]; second-life and recycling loop for Suzuki/MSIL packs (CP-PR1 projection).

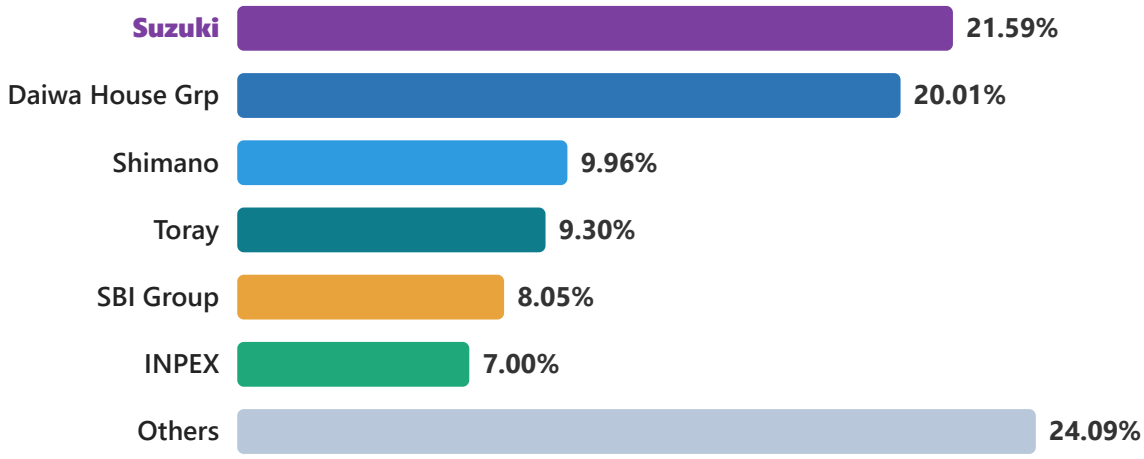

What ELIIY must prove in the next 10 years

Challenge	Evidence today	What to watch
Scale	Single Kawasaki plant; ~109k systems cumulative over 20 years [EL9] vs Chinese makers shipping hundreds of GWh/yr [G1]	0.48 GWh/yr Japan line on time (Jun 2029) [S49]

Cost	Not published; Chinese LFP cells at US$36–55/kWh [S12, S40]	Cost roadmap to be validated in joint research (Gate 0) [S49]
Mobility credibility	BEV Carry demo, motorcycle batteries [EL3, EL13]	Suzuki adoption in series-production EVs
IP / patents	Lost invalidation challenge vs GS Yuasa patent (2025) [EL16]	Freedom-to-operate for India production
Overseas experience	Japan-only sales and service today	India certification (BIS, IEC 62619, UL 9540A) and service model

CP-PR1 assessment using the sources cited.

ELIIY shareholder base – strategic backers

ELIIY company page, shareholder composition as of 26 May 2026 [EL12]. "Others" = remaining 20+ shareholders.

Localisation vs Imports

50–60%
Cells' share of BESS system cost – mostly imported
[E8]

20–30%
Containers, HVAC, electrical balance of plant – localisable today
[E7]

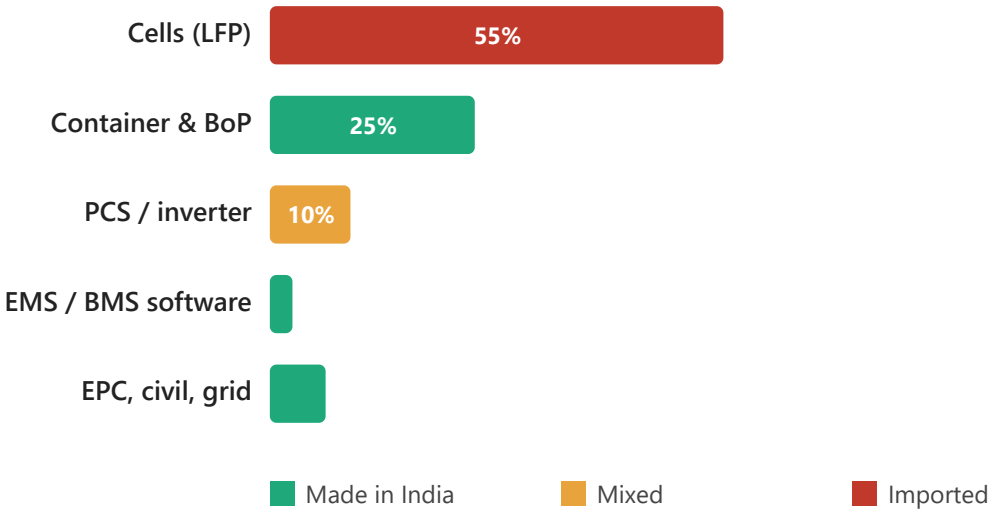

≥20%
DVA floor for VGF Tranche II (₹5,400 Cr, 30 GWh); must include indigenous EMS
[E7]

~98%
China's share of global LFP cathode production; India lithium refining ~zero
IEEFA [E5]

0–5%
Basic customs duty on Li-ion cells after Budget 2026 (from 15–20%)
[E13] secondary

Where the value of a BESS is made today

indicative, % of system cost

Cell share 50–60% [E8]; structural / BoP 20–30% [E7]; remaining split between PCS, EMS/BMS and EPC is a CP-PR1 estimate. Colouring is a CP-PR1 assessment for a typical 2026 utility project using imported LFP cells.

Localisation meter

share of BESS value made in India

Today (2026) – typical project with imported cells

~20–30% local | ~70–80% imported (cells, materials, some PCS)

2030 – if domestic cells reach ~110 GWh and materials plants start

~50–60% local | materials, equipment, some cells imported

2035 – with cathode/anode/electrolyte localised

~65–75% local | lithium & equipment imported

ELIIY angle: an India cell line on ELIIY technology would localise the largest cost block (cells) without relying on a Chinese licence – the main route from ~25% to 50%+ local content.

Today's range is consistent with the 20% DVA floor and the "20–50% localisation gap" discussed in [E7]. 2030 and 2035 bars are CP-PR1 scenarios based on announced capacity [E3, E11, E12] – not forecasts by any source.

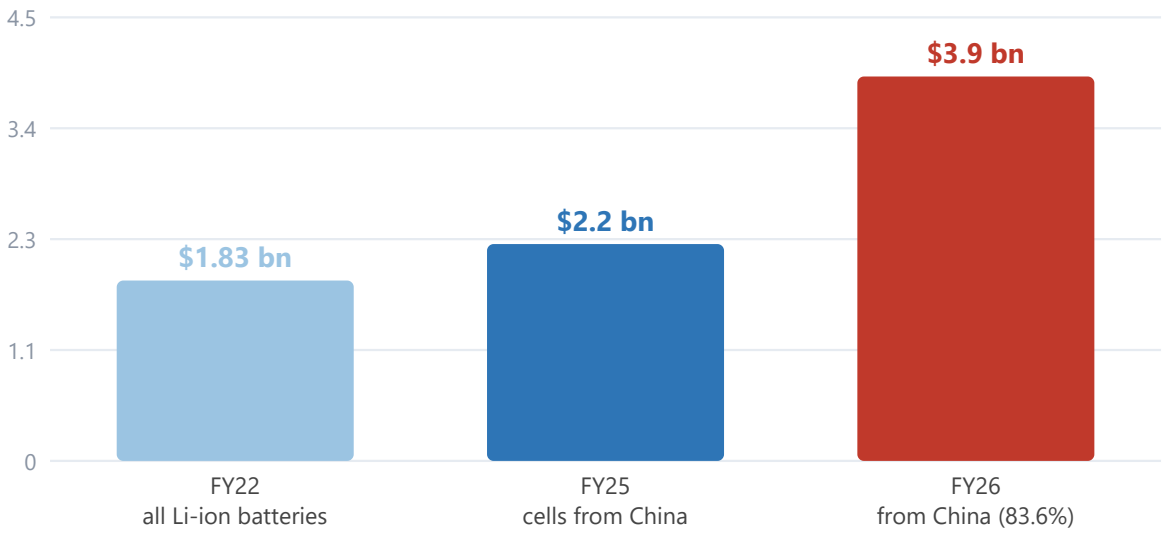

Component-level localisation – local vs imported content

Component	Cost share	Made in India today	Imported today (global suppliers)	Status	2030 outlook
Lithium & refined minerals	(in cell cost)	None at scale; KABIL Argentina block; Lohum refining plan	Ganfeng, Tianqi (China); Albemarle (US); SQM (Chile)	**Imported**	Partial – Lohum 30,000 t/yr; NCMM ₹16,300 Cr
Cathode / anode / electrolyte / separator	(in cell cost)	Pilot volumes; Himadri, Epsilon plants under construction	Hunan Yuneng, Dynanonic (LFP cathode); BTR, Shanshan (anode); Tinci, Capchem (electrolyte); SEMCORP (separator)	**Imported**	Partial – Himadri 40k MTPA (FY27), Epsilon 30k TPA (2028); ~₹12,000 Cr component scheme
Li-ion cells (LFP)	50–60%	~2 GWh capacity; Exide 6 GWh live Sep 2026	CATL, BYD, EVE, Hithium, CALB, Gotion, SVOLT, Envision/AESC; LGES, Samsung SDI	**Imported**	~110 GWh domestic capacity planned (shared with EVs)
Long-life LFP cells (ELIIY)	–	Not present in India today	ELIIY Power, Kawasaki (Japan) – small volumes	**Option**	SMC plan: Japan SOP 2029; India hub later [S49]
Module, pack, BMS	(incl. in container)	Amara Raja 1.5 GWh, Exide 1.5 GWh packs; integrators assemble locally	BMS chips, some modules	**Partly local**	Largely local
Container, HVAC / liquid cooling, fire suppression, electrical BoP	20–30%	JSW 5 GWh, Tata AutoComp–Gotion 6 GWh, GoodEnough 7 GWh, Waaree 5.15 GWh	Some cooling and fire-safety parts	**Largely local**	Pack-to-container capacity 180–200 GWh
PCS / inverter	CP-PR1 est. ~8–12%	Delta (Krishnagiri, TN) Make-in-India PCS; Hitachi Energy India	Sungrow, Huawei, SMA, Power Electronics; power semiconductors	**Partly local**	Mostly local assembly; chips imported
EMS / controls software	CP-PR1 est. ~2–5%	Required to be indigenous for VGF DVA	Fluence (Mosaic/IQ), Wärtsilä (GEMS), Tesla (Autobidder)	**Partly local**	Largely local
EPC, civil, grid connection, O&M	CP-PR1 est. ~10–15%	L&T, Tata Power, Sterling & Wilson, Jakson, Pace Digitek	–	**Local**	Local

Sources: [E3, E5, E6, E7, E8, E11, E12, E16, E17, E19, E20]; global supplier names per Global Players tab [G1]; ELIIY [EL1–EL5, S49]. Cost shares marked "CP-PR1 est." are indicative.

India's Li-ion battery imports

US$ bn; all uses (EV, electronics, storage)

FY22 all Li-ion battery imports [E18]; FY25 Li-ion cells from China only [E10]; FY26 Li-ion battery imports from China, China share 83.6% [E9]. Scopes differ – indicative trend only. China supplied ~75% of Li-ion battery imports in FY24 [E19].

Policy levers that move localisation

Lever	Effect on local content	Status
20% DVA for VGF projects	Forces local containers, BoP, EMS	Directive Dec 2025 [E7]
ACC-PLI ₹18,100 Cr (50 GWh)	Domestic cells	40 GWh awarded; ~1.4 GWh commissioned [E5]
10 GWh grid-scale ACC tender	Cells for stationary storage	Bids due 10 Nov 2026 [E21]
Component scheme (~₹12,000 Cr)	Cathode, anode, electrolyte, foil, separator	Reported final approval [E21]
NCMM ₹16,300 Cr	Mineral exploration, overseas assets, refining	Approved Jan 2025 [E19]
Customs duty on cells	Cut to 0–5% (cheaper imports now); expected to rise again 2028–30	Budget 2026 [E13] secondary
China export controls	Restricts transfer of LFP cathode, graphite and cell know-how – hits Chinese-licensed Indian plants	Effective 8 Nov 2025 [E10]

Last 5 Years (2021–26)

2021–2026 in one line: five years of policy building and tenders (2021–25) were followed by the first real build-out in 2026, when India commissioned more BESS in six months than in all earlier years combined.

51 → 341 MWh
BESS installed in 2023 → 2024 (6x)
Mercom [E14]

7.9 GWh
Commissioned in H1 2026 alone
IESA [E1]

12% → 49%
Hybrid (RE + storage) share of RE tenders, 2021 → 2024
IEEFA [E16]

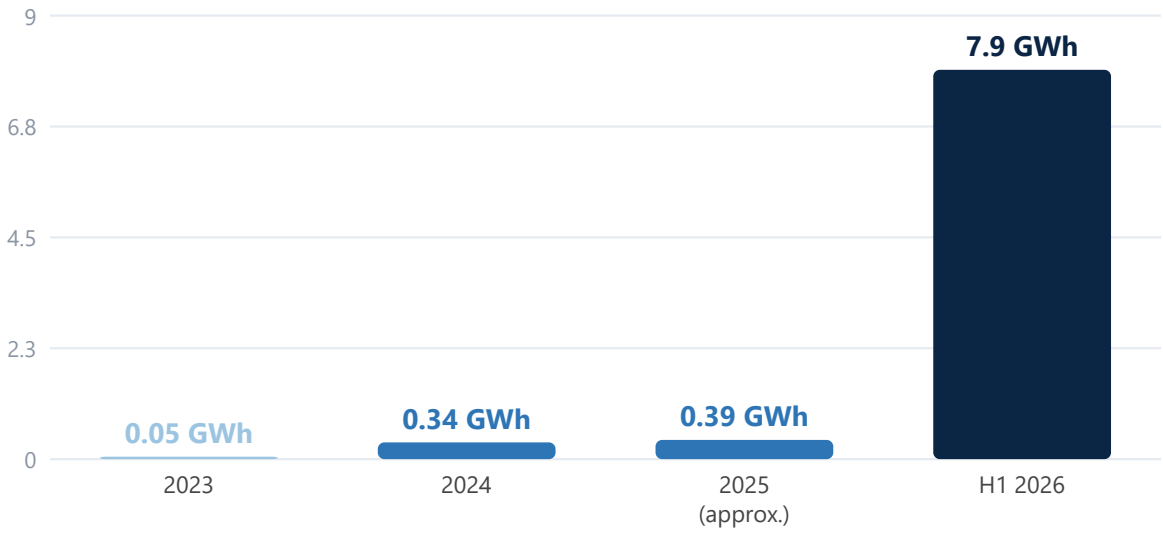

102 GWh
Storage tendered in 2025 (69 tenders), ≈ all of 2018–24
Eninrac [E15]

−86%
Standalone tariff ₹10.83 → ₹1.48 L/MW/month (2022 → Dec 2025)
MVApulse [E4]

53 GWh
Tenders cancelled (~20% of all floated)
IESA [E1]

Annual BESS additions

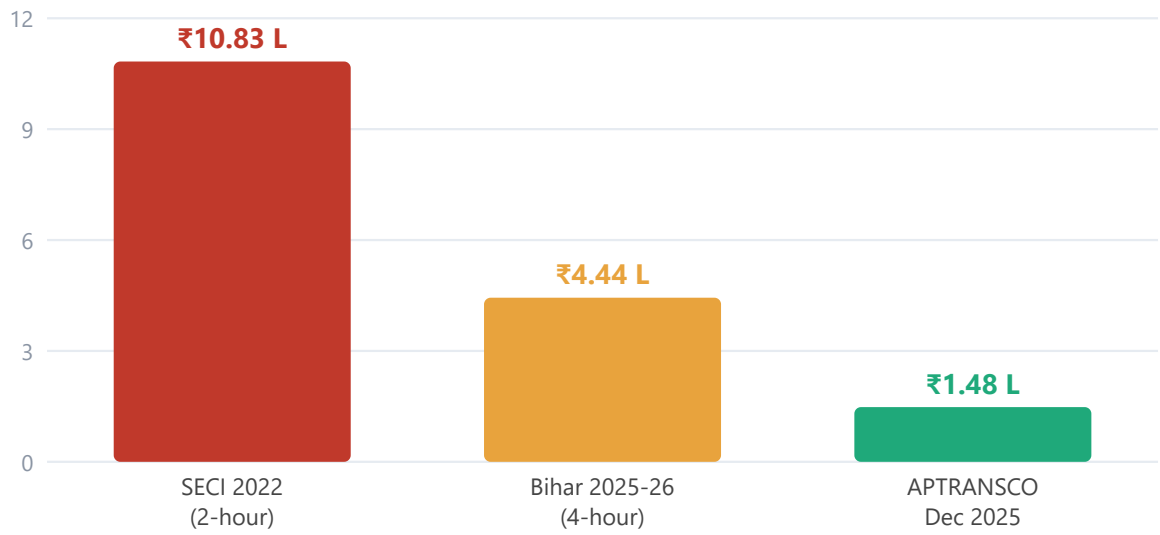

GWh

2023 & 2024: Mercom [E14]; 2025: derived from IESA Dec-25 fleet of 0.78 GWh [E1] less earlier additions (approximate); H1 2026: IESA [E1].

Standalone BESS tariff discovered

₹ lakh / MW / month

SECI 2022 and APTRANSCO Dec 2025 [E4]; Bihar BSPGCL 4-hour (125 MW/500 MWh) at ₹4.44 L [E20] – longer duration, not directly comparable.

Milestones 2021–2026

2021

ACC-PLI approved (12 May 2021): ₹18,100 Cr for 50 GWh of domestic cells [E22]. BESS limited to pilots, telecom backup, microgrids [E23]. Hybrid share of RE tenders ~12% [E16].

2022

PLI capacity awarded (40 GWh to 4 firms) [E19]. CEA NEP: 47.24 GW / 236.22 GWh BESS by FY32 [E23]. First SECI standalone tender at ₹10.83 L/MW/month [E4]. Exide–SVOLT licence [E10]. India imports ~US$1.83 bn of Li-ion batteries (FY22) [E18].

2023

VGF Tranche I (₹3,760 Cr, 13.85 GWh). 51 MWh BESS installed [E14]. Amara Raja–Gotion licence [E10]. **Suzuki becomes ELIIY Power's largest shareholder (Nov)** [EL1].

2024

341 MWh installed, 6x 2023 [E14]. Hybrid share of RE tenders reaches 49% [E16]. ~75% of Li-ion batteries imported from China [E19].

2025

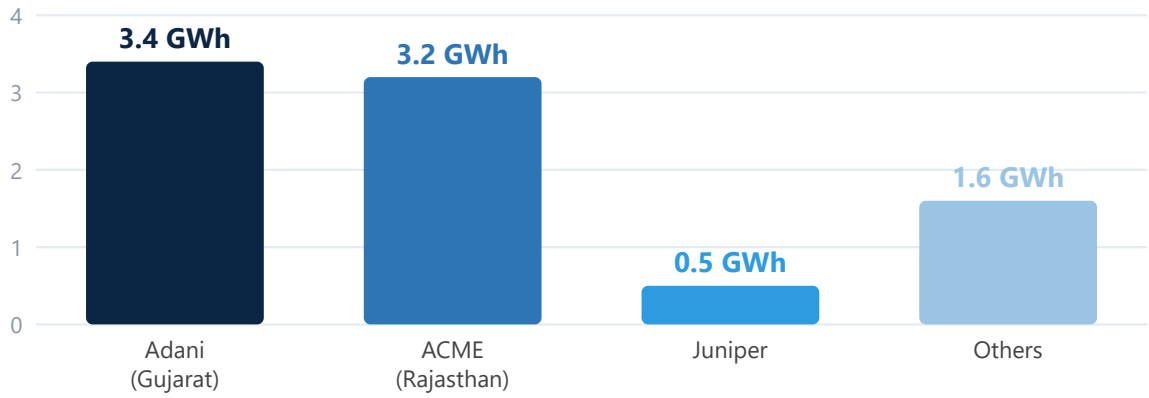

NCMM approved (Jan) [E19]. VGF Tranche II ₹5,400 Cr / 30 GWh (Jun) [E7]. 102 GWh storage tendered [E15]. China battery-technology export controls (Oct) [E10]. Record-low tariff ₹1.48 L (Dec) [E4]. 20% DVA directive (Dec) [E7]. Fleet 0.78 GWh by Dec [E1].

2026

GoodEnough 7 GWh BESS plant (Jan); Waaree 5.15 GWh (Jul); JSW 5 GWh Pune plant and first third-party order 200 MW/400 MWh (Jul) [E6]. Delta Make-in-India PCS 110 MW order (Jan) [E17]; Hitachi Energy India's first BESS order [E24]. 7.9 GWh commissioned in H1 → 8.7 GWh fleet [E1]. Exide 6 GWh cell plant live (Sep). China share of Li-ion imports 83.6% (FY26) [E9].

Who built India's first 8.7 GWh

largest H1 2026 projects

Project	Size	Mode	Supplier
Adani, Gujarat	3,400 MWh	Merchant	Not stated
ACME, Rajasthan	3,200 MWh	Merchant	Envision (imported)
Juniper	500 MWh	Merchant	Hithium (imported)

IESA H1 2026 market review via Saur Energy [E1]. ~70% of H1 2026 additions were merchant projects built outside the tender route.

Next 10 Years (2026–36)

Correction to earlier material: the FY36 figure of ~890 GWh used in our earlier dashboards (from a secondary source) refers to **total energy storage**, not BESS alone. IESA's reading of CEA's projection is 888 GWh of storage by 2035-36, of which ~321 GWh is BESS and ~567 GWh is pumped storage [E2].

236 GWh
BESS needed by FY2031-32 (47.24 GW)
CEA NEP [E4, E23]

~321 GWh
BESS by 2035-36 (of 888 GWh total storage)
IESA citing CEA [E2]

50 → 140 GWh
Annual storage additions, 2027 → 2036
IESA [E2]

28 → 272 GWh
India Li-ion cell demand 2025 → FY2030 (EV + storage)
IEEFA [E5]

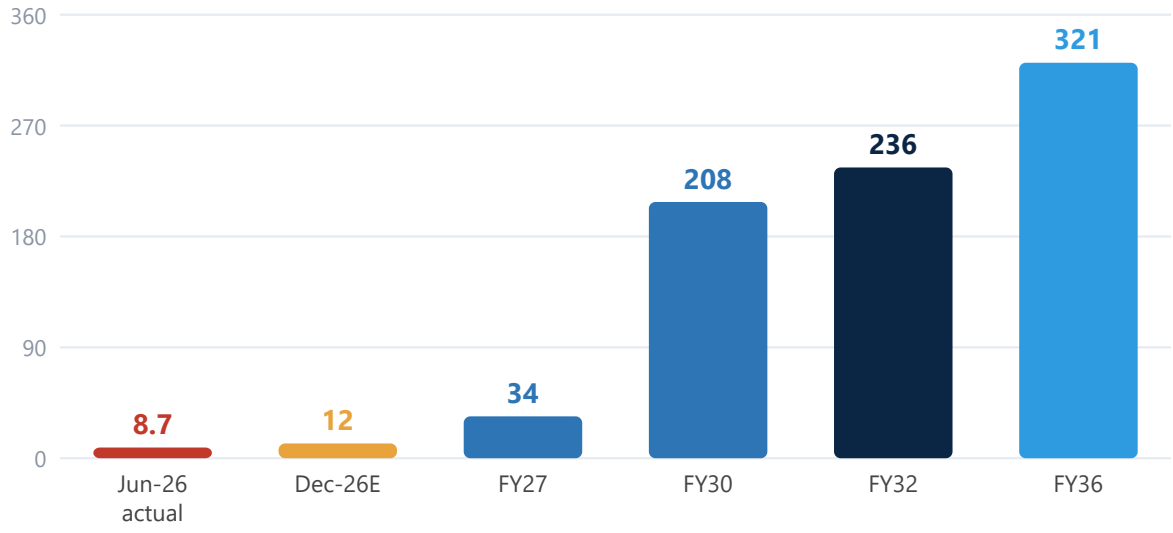

~110 GWh
Domestic cell capacity planned by 2030
IESA [E3]

180–200 GWh
Pack-to-container capacity by 2030
IESA [E3]

23–31 GWh
C&I storage market by 2032 (<1 GWh in 2025)
IESA [E25]

BESS demand trajectory

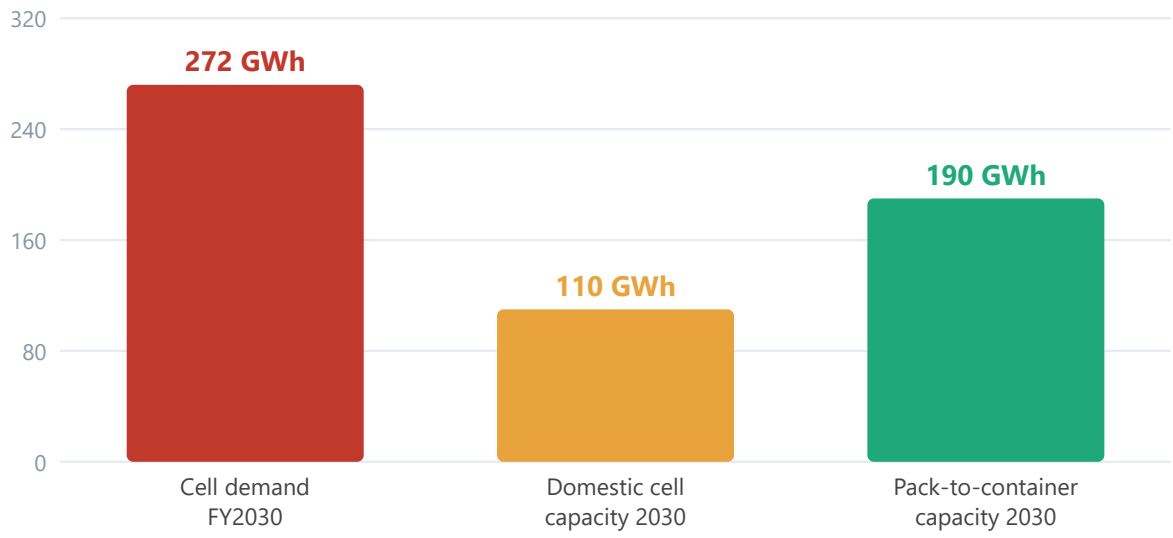

cumulative GWh

Jun-26 actual [E1]; Dec-26E [E1]; FY27 34 GWh and FY32 236 GWh [E4, E23]; FY30 ~208 GWh (CEA via MoP, earlier dashboard); FY36 ~321 GWh BESS [E2].

Demand vs domestic supply, 2030

GWh / year

Cell demand FY2030 272 GWh [E5]; domestic cell capacity ~110 GWh [E3]; pack-to-container 180–200 GWh (midpoint shown) [E3]. Cell capacity is shared between EVs and storage.

10-year roadmap 2026–2036 – what changes each year

2026–27

Fleet 12–15 GWh by Dec 2026 [E1]. ~50 GWh/yr storage additions from 2027 [E2]. First domestic LFP cell volumes: Exide 6 GWh, Agratas 20 GWh (2027), Waaree 3.5 GWh (FY27), Amara Raja 2 GWh. Himadri LFP cathode Ph-1 (Q3 FY27). 10 GWh grid-scale ACC tender awarded. **ELIIY E series mass production (Japan, FY2026)** [EL5].

2028

Full ISTS waiver for co-located storage ends (Jun 2028). Epsilon anode 30k TPA. Customs duty on cells expected to rise again as domestic capacity scales (2028–30) [E13].

2029–30

4% Energy Storage Obligation for DISCOMs. Domestic cells ~110 GWh, pack-to-container 180–200 GWh [E3]. Cell demand ~272 GWh [E5]. JSW 40 GWh storage portfolio. Reliance scaling towards 120 GWh/yr. **SMC–ELIIY 2nd-gen battery SOP in Japan (Jun 2029, plan)** [S49].

FY2031-32

236 GWh BESS (CEA NEP) [E4]. Amara Raja 16 GWh cells + 5 GWh packs. C&I storage 23–31 GWh [E25]. Sodium-ion begins to scale (Reliance–Faradion). **Possible India ELIIY-based cell hub decision (~20 GWh long term)** [S49].

2033–35

NMC near-zero in BESS; long-duration (4h+) and flow batteries grow. Domestic cathode/anode capacity expanded (Himadri 200k MTPA, Epsilon 100k TPA).

2035-36

888 GWh total storage, ~321 GWh BESS [E2]; annual storage additions ~140 GWh [E2]. Next horizon: ~230 GW BESS by 2047 (CEA long-term).

Company milestones from the Strategy Dashboard source register; chemistry outlook from NITI Aayog scenarios. Year placement after 2030 is indicative. ELIIY plan items from confidential SMC proposal [S49].

Player Roadmaps – Indian and global

> **Pattern:** almost every Indian player followed the same path over 2021–26 – licence Chinese cell technology or import cells, start with packs and containers, then build cells. Global players supply cells and systems today and are localising assembly. The next 10 years test whether cell and materials plants arrive on time.

All | Cells | Integration / containers | PCS / electronics | Developers / EPC | Materials & recycling | Global suppliers

Player	Area	Last 5 years (2021–26)	Next 10 years (2026–36) – announced plan	Note
Reliance New Energy	Cells	Giga-complex announced; PLI award (10 + 5 GWh); equipment delivered	40 GWh Ph-1 commissioning 2026 → 120 GWh/yr cells + BESS; sodium-ion (Faradion)	LFP; own Kutch RE as anchor
Agratas (Tata)	Cells	Sanand plant under construction; AESC licence + in-house LFP	Cells 2027 (20 GWh) → 40 GWh India + 40 GWh UK	Captive Tata Motors / JLR + Tata Power
Exide Energy	Cells	SVOLT licence (2022); 1.5 GWh packs; 6 GWh cells live Sep 2026	Ph-II to 12 GWh (~₹3,000 Cr); revenue from Q3 FY27	Chinese-licensed – exposed to export controls
Amara Raja	Cells	Gotion licence (2023); 1.5 GWh pack plant; CQP Jul 2026	2 GWh Giga-1 CY2027 → 16 GWh cells + 5 GWh packs by 2031 (₹9,500 Cr)	LFP; EV + storage
Ola Cell Tech	Cells	PLI 20 GWh; ~1 GWh 4680 cell line	5 GWh near term → 20 GWh (PLI window to 2031)	Same cell for 2W and Ola Shakti BESS
TDSG (Toshiba–Denso–Suzuki)	Cells	Hansalpur; electrodes localised Aug 2025	Hybrid cells; base for Suzuki battery skills	Japanese technology
ELIIY Power (Suzuki partner)	Global	Suzuki largest shareholder (2023); E series high-Ni cell announced (Sep 2026)	E series mass production FY2026 (Japan); 2nd-gen SOP Jun 2029, 0.48 GWh/yr; India hub ~20 GWh long term (plan)	Japanese tech; safety & long life [EL1–EL5, S49]
CATL	Global	World #1; Europe plants; Shenxing fast-charge LFP	Indonesia US$6 bn value chain; sodium-ion RMB 50 bn [G1]	Main global cell source
BYD	Global	Blade LFP; top BESS system supplier 2025	Brazil local assembly; overseas 50% of volume by 2030 [G1]	Integrated EV + BESS
Hithium	Global	Storage-only; 200 GWh cumulative shipped	Spain plant 2027; Texas assembly; 1,175–1,300 Ah long-duration cells [G1]	Supplied Juniper (India)
LG Energy Solution	Global	LFP ESS lines in US	>60 GWh ESS capacity by end-2026; Poland LFP [G1]	Non-Chinese alternative
Waaree Energy Storage	Integration	5.15 GWh container plant (Jul 2026); ₹1,003 Cr strategic round	3.5 GWh cells FY27 → 20 GWh roadmap	Moving upstream from containers to cells

JSW Energy / JSW Group	**Integration**	5 GWh container plant Pune; first 3rd-party order 200 MW/400 MWh (₹444 Cr, Jul 2026)	Nagpur cells (₹15,000 Cr); 40 GWh storage portfolio by 2030	Developer + manufacturer
Tata AutoComp–Gotion	**Integration**	6 GWh BESS manufacturing; supplying Tata Power	Scale with Tata Power utility & C&I demand	Chinese technology partner
GoodEnough Energy	**Integration**	7 GWh BESS plant, Noida (Jan 2026)	Expansion with tender pipeline	Assembly with imported cells
Delta Electronics India	**PCS**	Make-in-India 1.1 MW PCS (Krishnagiri); 110 MW order for Prostarm (BSPGCL, AEML)	Scale local PCS for utility BESS	Localises PCS for DVA
Hitachi Energy India	**PCS**	First BESS order 165 MW/330 MWh (Q1 FY27)	Grid-scale BESS integration, grid-forming	Grid & power-quality strength
Tata Power	**Developer**	100 MW Mumbai BESS; 50 MW/100 MWh tender; MySine	Utility, DISCOM, C&I and home storage scale-up	Integrated with Agratas & Tata AutoComp–Gotion
ACME / Adani / Juniper	**Developer**	Merchant BESS H1 2026: 3.2 / 3.4 / 0.5 GWh (Envision, Hithium suppliers)	Merchant + tender projects; large share of 50–140 GWh/yr additions	Imported cells & systems today
Pace Digitek, Oriana, Bondada, Prostarm	**Developer**	Most active standalone-tender winners	Developer–EPC role in VGF tenders	Will need 20%+ local content
Himadri Speciality	**Materials**	LFP cathode plan announced (₹1,125 Cr Ph-1)	40k MTPA Q3 FY27 → 200k MTPA (₹4,800 Cr)	First domestic LFP cathode
Epsilon Advanced Materials	**Materials**	Anode technology; ₹145 Cr ECMS support	30k TPA by 2028 → 100k TPA	Domestic graphite anode
Lohum / Attero / LICO	**Materials**	Recycling & second life; MG Project Revive	Lohum 30,000 t/yr lithium refining; second-life BESS	Circular supply of minerals

Sources: SMM [E6]; IESA [E1, E3]; Delta [E17]; Hitachi Energy [E24]; global [G1]; ELIIY [EL1–EL5, S49]; company items per the Strategy Dashboard register ([S17]–[S47]). "Next 10 years" reflects announced plans, not forecasts.

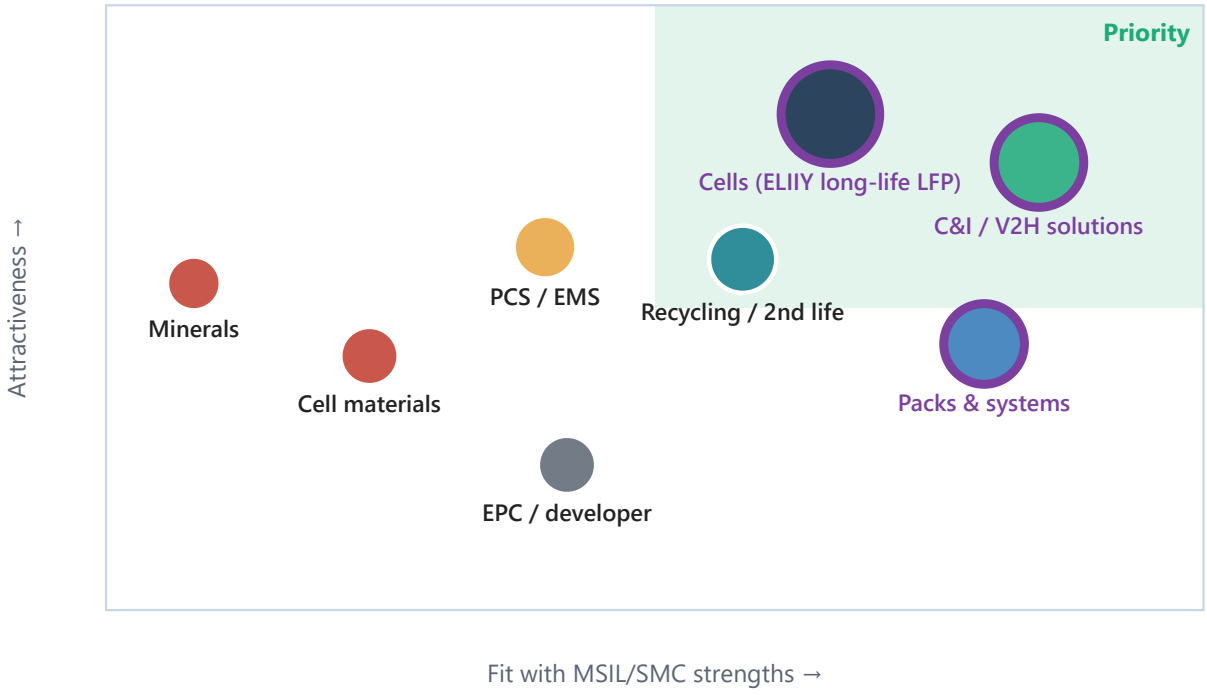

Implications for MSIL / SMC

What the ecosystem means for an MSIL / SMC entry

Finding	Implication for MSIL / SMC
Integration capacity is filling fast (~23 GWh commissioned; 180–200 GWh by 2030)	Pure container assembly will become crowded – differentiate on cells, quality, warranty and service
Cells are 50–60% of cost and still imported	The real localisation gap – ELIIY long-life, high-safety LFP is Suzuki's distinctive asset; stage-gated India cell plan
20% DVA today; likely to rise	Design for local content from day one: local container, BMS/EMS, PCS partner (Delta, Hitachi Energy)
China export controls on cell know-how	Japan-origin technology (ELIIY, TDSG) is a sourcing advantage over Chinese licences
Merchant and C&I segments growing (C&I 23–31 GWh by 2032)	C&I / telecom beach-head – where ELIIY's safety and heat tolerance matter most
V2H and residential under-served in India	Port ELIIY's V2H home systems with Suzuki EVs and dealers
Global Chinese players dominate scale and cost	Do not compete on lowest ₹/kWh; compete on lifetime cost (LCOS), safety and service

CP-PR1 interpretation of the evidence in this dashboard.

Where MSIL / SMC could play in the chain

Attractiveness and fit are CP-PR1 qualitative scores (1–5) to frame discussion; purple = stages where ELIIY Power adds strength. Not sourced metrics.
